

New, improved
3M™ Graffiti
Stain Remover.

At last. A safe and simple way to remove unsightly graffiti.

Whatever the substance, whatever the surface, you can rely on 3M's new range of graffiti removers to clean harder, faster and safer. Specially formulated for use on brickwork and concrete, painted surfaces and plastic, they offer a low-risk alternative to traditional chemicals, protecting your cleaners, and the environment, without compromising on performance.

Another innovative solution from 3M

Unsightly and offensive graffiti is damaging to your customers' property and corporate image. As a contract cleaner, you're under pressure to remove it quickly, and thoroughly. Traditional chemical removers clean hard, but are flammable and corrosive, and pose a serious risk to health. 'Greener' alternatives are safe to use, but are perceived as less efficient. With 3MTM Graffiti Stain Remover, you no longer have to make a trade off between safety and performance. Simply choose your product to suit the surface:

- GR1500 is designed to remove graffiti safely and effectively from most plastic surfaces and from most painted or varnished surfaces, without damaging or harming them
- GR3000 is formulated to quickly and effectively remove graffiti from brickwork and concrete surfaces

Six reasons to choose 3M Graffiti Stain Remover.

1. Multi-purpose – 3M Graffiti Stain Remover is effective on a wide range of graffiti substances including aerosol spray paint, permanent markers, lipstick, crayon and emulsion paint.

2. High performance – the solvent's liquid form allows for quick penetration and rapid breakdown of graffiti. Thanks to its high boiling point it also evaporates into the atmosphere more slowly, increasing efficiency, extending performance and reducing total costs.

3. Low hazard – GR1500 and GR3000 both carry the signal word 'warning', unlike many other graffiti removers on the market that carry the signal word 'danger'. Neither product contains NEP (N-Ethyl-pyrrolidone) or NMP (N-Methyl-2-pyrrolidone) which are widely used within graffiti removers and can pose a significant risk to health.

4. Low odour – 3M Graffiti Stain Remover has little odour, enhancing user comfort and efficiency – unlike traditional chemical removers which omit powerful odours and harmful vapours.

5. Low flammability – high flash point product are safe-in-use. GR1500 has a flashpoint of 100°C while GR3000 has a flashpoint of 166°C.

6. Low environmental impact – 100% of components in GR1500 and greater than 90% in GR3000 are biodegradable by OECD 301, and both are REACH-compliant. Neither product contains aromatic, aliphatic or chlorinated solvents.

Safe and easy to use

3M Graffiti Stain Remover is available in ½ litre and 5 litre bottles. Simply apply to the graffiti and leave for a few seconds before agitating with a cloth or brush. Wipe off any residue with a clean damp cloth, or for best results wash with a mild detergent. For stubborn stains, reapply if necessary, then wipe and rinse as above.

Altogether better

3M Graffiti Stain Remover is the latest addition to 3M's comprehensive range of innovative surface cleaners, which are renowned for their simplicity, efficiency, durability and low environmental impact. From Scotch-Brite™ Microfibre Wipes, Scotch-Brite™ Sponges and Scourers to 3M™ Stainless Steel Cleaner and Polisher, 3M cleaning solutions work harder, faster, for longer – so you don't have to.
